New Presentation Announcement!

September 2013

On October 28, 2013 we will be presenting at the Medical Device and Manufacturing Exposition and Conference in Minneapolis, Minnesota. Our topic is “Why Should You Move Design of Experiments Upstream?” The New Product Development process is challenging and complex. With a focus on improving cost competitiveness and yet avoiding recalls, we feel it is critical to make this move - as we have done successfully countless times for organizations. Below is a sample video that covers one aspect of the Innovation topic – Test Strategy Development for Innovation. <http://bit.ly/13FB8vP>

Other topics on the Design for Success Track at the conference are disruptive design innovation and creating next generation products. Our medical device experiences in these areas plus other industries will be easy to relate to. We will complement both presentations with our focus on execution and resolving complex situations. I will be joined by Mike McGovern from Innovize to provide insight of our work together. The following link will bring you to more details about the conference. <http://bit.ly/13TBaEP>

Looking forward to seeing you at our talk! If you cannot attend the conference, we can at least find some time to meet together at the Expo. Having attended it for the past 7 years, I know there is value to be gained by being there. Connect with us ahead of time, and we will set up a time to talk.

Have a great day!
